Saffron

Grades :

Saffron is the Stigma/Filament of the flower named crocus. Classification and grade of saffron depends on the cutting place of the filament.

According to the diversity of cultures, perception and taste of people varies from a nation to another one. People use saffron in different shapes for different purpose.

Considering that the complete saffron filament has entirely all benefits of saffron, but the filament cutting area can define the different grade of this exotic spice with specific shape, aroma, flavor and color.

The common categories of saffron which is only founded on the cutting area of filament, is known as following list and is popular among producing countries.

Sargol:

This kind of saffron is cut from the red part of filament is completely red color without any percentage of yellow style. This grade is also having high amount of aroma, color and flavor.

Negin:

The highest part of the filament of saffron thread, is called Negin which is fully dark red and thick in size with the highest amount of saffron aroma, color and flavor. The threads are bright crimson with a orangish-color style of less than one percent. Negin has the highest length among other saffron grades.
